

Blogging

DocsForge includes a built-in blog plugin. Write posts in Markdown, get a beautiful blog with authors, tags, archives, pagination, and RSS feeds.

Setup

Add a `blog/` directory inside your `docs/` folder:

```
docs/
├── blog/
│   ├── .authors.yml      # Author profiles
│   ├── index.md          # Blog landing page
│   └── posts/
│       ├── 2026/
│           ├── 01/
│               ├── 01/
│                   ├── hello-world/
│                       └── index.md
```

Author profiles

Create `docs/blog/.authors.yml`:

```
authors:
  qq:
    name: QQ
    description: 12-year-old developer
    avatar: https://github.com/QQSHI13.png
  nova:
    name: Nova
    description: AI Assistant
    avatar: https://github.com/QQSHI13.png
```

Writing a post

Create `docs/blog/posts/YYYY/MM/DD/post-slug/index.md`:

```
---
date: 2026-01-01
authors:
  - qq
tags:
```

```

- tutorial
- docsforge
---

# Hello World

Your post content here...

<!-- more -->

This is the excerpt break. Content before `<!-- more -->` appears in post
listings.

```

Front matter:

Property	Required	Description
<code>date</code>	✓	Post date (<code>YYYY-MM-DD</code>)
<code>authors</code>	✓	List of author keys from <code>.authors.yml</code>
<code>tags</code>	✗	List of tags
<code>categories</code>	✗	List of categories
<code>draft</code>	✗	Set <code>true</code> to hide from listings

Blog index page

Create `docs/blog/index.md` for your blog landing page:

```

---
title: Blog
hide:
  - navigation
  - toc
---

# Blog

Welcome to my blog!

[:octicons-rss-24: RSS Feed](../feed_rss_created.xml)

```

Configuration

The blog plugin works with sensible defaults. To customize:

```
plugins:
  - blog:
      blog_dir: blog
      post_date_format: long          # "January 1, 2026"
      archive_date_format: MMMM YYYY # "January 2026"
      categories_allowed:
        - tutorial
        - news
        - release
      pagination_per_page: 10
```

Option	Default	Description
<code>blog_dir</code>	<code>blog</code>	Directory under <code>docs/</code>
<code>post_date_format</code>	<code>long</code>	Date format for posts
<code>archive_date_format</code>	<code>YYYY</code>	Date format for archive
<code>categories_allowed</code>	<code>all</code>	Restrict allowed categories
<code>pagination_per_page</code>	<code>10</code>	Posts per page

RSS feeds

The blog plugin automatically generates RSS feeds:

- `feed_rss_created.xml` — All posts, newest first
- `feed_rss_updated.xml` — Recently updated posts

Access them at `/blog_dir/feed_rss_created.xml`.

Archive

Posts are automatically grouped by year and month:

- `/blog/archive/2026/` — All 2026 posts
- `/blog/archive/2026/01/` — January 2026 posts

Tags

Tags are listed on the blog index and each tag gets its own page:

- </blog/tag/tutorial/> — All posts tagged "tutorial"

Reading time

Each post displays an estimated reading time based on word count.

 Jun 01, 2026
