

DocsForge

Write your documentation in Markdown. Build a professional static site in seconds. Deploy anywhere.

Coming from MkDocs?

DocsForge is the actively maintained successor to MkDocs + Material for MkDocs. See the [migration guide](#) to convert your project manually.

```
pip install docsforge
docsforge serve
```

What makes DocsForge different

Zero Dependencies

Everything is bundled. `pip install docsforge` gets you the engine, Material theme, all plugins, all extensions, fonts, icons, math rendering, and a service worker.

Zero Config

Start with just `site_name: .` All 7 plugins and 31 Markdown extensions load automatically. Customize only when you need to.

Math Works

Write `$$...$$` and it renders. KaTeX is vendored — no CDN calls for readers, no `extra_javascript`, no setup.

Syntax Highlighted

Code blocks render with Pygments colors at build time. No client-side JavaScript needed.

Instant Search

Full-text search built in, powered by a client-side Lunr.js index.

Dark Mode

Light/dark toggle in the header. Auto-detects system preference.

TikZ Diagrams

Write TikZ directly in Markdown. Auto-compiled to SVG at build time.

Blogging

Built-in blog with authors, tags, archives, pagination, and RSS feeds.

Offline Support

Service worker caches all assets. Works without an internet connection.

Quick start

```
pip install docsforge
docsforge          # create a new project interactively
cd my-docs
docsforge serve
```

That's it. Your documentation site is now running at localhost:8000.

What you get

Feature	Status
Admonitions (<code>!!! note</code>)	✓ Zero config
Math (<code>\$\$...\$\$</code>)	✓ Zero config
Code highlighting	✓ Zero config
Tables	✓ Zero config
Task lists (<code>- [x]</code>)	✓ Zero config
Footnotes (<code>[^1]</code>)	✓ Zero config
Definition lists	✓ Zero config
Abbreviations	✓ Zero config
Content tabs	✓ Zero config
Diagrams (Mermaid, TikZ)	✓ Zero config
Emojis	✓ Zero config
Blog	✓ Zero config
Tags	✓ Zero config
Search	✓ Zero config
Privacy (self-host assets)	✓ Zero config
Minify (HTML/CSS/JS)	✓ Zero config
Offline/PWA	✓ Zero config
