

Diagrams

DocsForge integrates [Mermaid.js](#) for creating diagrams with text. No external tools or image editors needed — just write the diagram code in a fenced block.

Configuration

Mermaid support is enabled by default:

```
markdown_extensions:  
  - pymdownx.superfences:  
      custom_fences:  
        - name: mermaid  
          class: mermaid  
          format: !!python/name:pymdownx.superfences.fence_code_format
```

Vendored

Mermaid is bundled with DocsForge. Readers make no CDN calls; external assets are fetched at build time if needed.

Flowchart

Show processes, decisions, and workflows:

```
graph LR  
  A[Start] --> B{Is it?}  
  B -->|Yes| C[OK]  
  C --> D[Rethink]  
  D --> B  
  B -.->|No| E[End]
```

```
```mermaid  
graph LR
 A[Start] --> B{Is it?}
 B -->|Yes| C[OK]
 C --> D[Rethink]
 D --> B
 B -.->|No| E[End]
```

### Flowchart direction

Direction	Syntax	Description
Left-to-right	<code>`graph LR`</code>	Horizontal flow
Top-to-bottom	<code>`graph TD`</code>	Vertical flow
Right-to-left	<code>`graph RL`</code>	Reverse horizontal
Bottom-to-top	<code>`graph BT`</code>	Reverse vertical

### Node shapes

```
```mermaid
graph TD
    A[Rectangle] --> B(Rounded)
    B --> C{Decision}
    C --> D[[Subroutine]]
    D --> E[(Database)]
    E --> F((Circle))
```

Syntax	Shape
<code>A[text]</code>	Rectangle
<code>A(text)</code>	Rounded
<code>A{text}</code>	Diamond/Decision
<code>A[[text]]</code>	Subroutine
<code>A[(text)]</code>	Database
<code>A((text))</code>	Circle
<code>A>text]</code>	Asymmetric
<code>A{text}</code>	Rhombus

Sequence diagram

Show interactions between entities over time:

```
sequenceDiagram
    participant User
    participant DocsForge
    participant GitHub

    User->>DocsForge: Write documentation
    User->>DocsForge: Run build
    DocsForge-->>User: Static site
    User->>GitHub: git push
    GitHub-->>User: Deployed site
```

```
```mermaid
sequenceDiagram
 participant User
 participant DocsForge
 participant GitHub

 User->>DocsForge: Write documentation
 User->>DocsForge: Run build
 DocsForge-->>User: Static site
 User->>GitHub: git push
 GitHub-->>User: Deployed site
```

### ### Arrow types

Syntax	Meaning
`->`	Solid line
`-->`	Dotted line
`->>`	Solid arrow
`-->>`	Dotted arrow
`-x`	Solid cross
`--x`	Dotted cross

---

### ## Class diagram

Show object-oriented structure:

```
```mermaid
classDiagram
    class Site {
        +String name
        +String url
        +build()
        +serve()
    }
    class Theme {
        +String name
        +configure()
    }
    class Plugin {
```

```
+String name
+load()
}
Site --> Theme : uses
Site *-- Plugin : contains
```

Relationship types

Syntax	Meaning
-->	Association
*--	Composition
o--	Aggregation
-- >	Inheritance
..>	Dependency
--	Link

State diagram

Show state machines and transitions:

```
stateDiagram-v2
    [*] --> Draft
    Draft --> Review: Submit
    Review --> Published: Approve
    Review --> Draft: Reject
    Published --> [*]
```

```
```mermaid
stateDiagram-v2
 [*] --> Draft
 Draft --> Review: Submit
 Review --> Published: Approve
 Review --> Draft: Reject
 Published --> [*]
```

---

## ## Gantt chart

Show project timelines:

```
```mermaid
gantt
    title DocsForge Roadmap
    dateFormat YYYY-MM-DD
    section Q1
    Core features      :done, a1, 2025-01-01, 2025-02-28
    Testing            :active, a2, 2025-03-01, 2025-03-31
    section Q2
    Release            :a3, 2025-04-01, 2025-04-30
    Documentation      :a4, 2025-05-01, 2025-06-30
```

```
```mermaid
gantt
 title DocsForge Roadmap
 dateFormat YYYY-MM-DD
 section Q1
 Core features :done, a1, 2025-01-01, 2025-02-28
 Testing :active, a2, 2025-03-01, 2025-03-31
 section Q2
 Release :a3, 2025-04-01, 2025-04-30
 Documentation :a4, 2025-05-01, 2025-06-30
```

## ### Status indicators

Status	Syntax	Color
Done	<code>`:done,`</code>	Green
Active	<code>`:active,`</code>	Blue
Critical	<code>`:crit,`</code>	Red
Default	<code>`:,`</code>	Gray

---

## ## Pie chart

Show proportional data:

```
```mermaid
pie title Distribution
    "Documentation" : 40
    "Code" : 35
    "Tests" : 20
    "Config" : 5
```

Git graph

Show Git branch history:

```
gitGraph
  commit
  branch develop
  checkout develop
  commit
  commit
  checkout main
  merge develop
  commit
```

Mindmap

Show hierarchical concepts:

```
mindmap
  root((DocsForge))
    Getting Started
      Installation
      Quick Start
    Setup
      Colors
      Fonts
      Navigation
    Reference
      Admonitions
      Code Blocks
      Diagrams
```

Entity relationship diagram

```
erDiagram
    USER ||--o{ DOCUMENT : creates
    USER {
        string username
        string email
    }
    DOCUMENT {
        string title
        string content
        date created_at
    }
```

User journey

```
journey
  title User journey for DocsForge
  section Install
    Download: 5: User
    Install: 4: User
  section Setup
    Configure: 3: User, DocsForge
    Build: 5: DocsForge
  section Deploy
    Push: 4: User
    Host: 5: DocsForge
```

C4 diagram (architecture)

```
C4Context
  title System Context Diagram
  Person(user, "User", "Documentation reader")
  System(docsforge, "DocsForge", "Documentation engine")
  System_Ext(github, "GitHub", "Hosting platform")
  Rel(user, docsforge, "Reads docs")
  Rel(docsforge, github, "Deploys to")
```

Best practices

- Keep diagrams simple — 5-10 nodes maximum for readability
 - Use consistent direction within a page (all LR or all TD)
 - Add labels to arrows (`-->|label|`)
 - Use colors sparingly
 - Test diagrams in both light and dark themes
 - Avoid diagrams wider than the content area
 - Add a text description below complex diagrams for accessibility
-

Troubleshooting

Diagram not rendering

1. Check Mermaid syntax is valid (use [Mermaid Live Editor](#))

2. Ensure ```mermaid` fence is used (not `````)
3. Complex diagrams may need `mermaid` extension explicitly enabled

Text too small

Break large diagrams into smaller sub-diagrams. Consider using `subgraph`:

```
graph TD
  subgraph Authentication
    A[Login] --> B[Verify]
  end
  subgraph Content
    C[Load] --> D[Render]
  end
  B --> C
```
