

Tooltips

Tooltips show additional information when hovering over text.

Abbreviations

Define abbreviations that show full text on hover:

```
The HTML specification is maintained by the W3C.  
  
*[HTML]: Hyper Text Markup Language  
*[W3C]: World Wide Web Consortium
```

The HTML specification is maintained by the W3C.

Footnotes

Add footnotes with references:

```
DocsForge is a self-contained documentation build system.[^1]  
  
[^1]: All dependencies are vendored into the project repository.
```

DocsForge is a self-contained documentation build system.¹

Content tooltips

Enable with `content.tooltips` feature:

```
theme:  
  features:  
    - content.tooltips
```

This adds hover tooltips for abbreviations and links throughout the site.

Link tooltips

Use `title` attribute for link tooltips:

```
[DocsForge](https://github.com/QQSHI13/docsforge "Self-contained documentation builds")
```

Definition lists as tooltips

Definition terms can serve as glossary entries:

```
DocsForge
:   A self-contained documentation build system with vendored dependencies.

Material
:   The most popular documentation theme, built into DocsForge.
```

DocsForge

A self-contained documentation build system with vendored dependencies.

Material

The most popular documentation theme, built into DocsForge.

Creating a glossary page

Collect all definitions on one page for easy reference:

```
# Glossary

## A

**API**
:   Application Programming Interface – a set of protocols for building
    software.

## B

**Build**
:   The process of converting Markdown files into a static HTML site.

## D

**DocsForge**
:   A self-contained documentation engine with vendored dependencies.
```

Magic links

Automatic link conversion for GitHub references:

See [issue #123](#) and [PR #456](#) for details.

Enable with:

```
markdown_extensions:  
  - pymdownx.magiclink:  
      repo_url_shorthand: true  
      user: QQSHI13  
      repo: docsforge-docs
```

Link preview tooltips

When `content.tooltips` is enabled, links to external sites show a preview on hover:

```
theme:  
  features:  
    - content.tooltips
```

Hover over [this GitHub link](#) to see a preview.

Best practices

- Keep abbreviations short and commonly used
- Write definitions in your own words, not dictionary copies
- Group related terms in definition lists
- Test tooltips on mobile (they work differently on touch devices)

Next steps

- [Formatting](#)
- [Icons & Emojis](#)

1. All dependencies are vendored into the project repository. [←](#)
