

Changing the colors

DocsForge uses the Material theme's color system. Customize colors in `docsforge.yml` under the `theme.palette` key.

Color palette

A color palette defines the colors used throughout your site. You can define multiple palettes and let users switch between them (e.g., light and dark mode).

Minimal configuration

```
theme:
  palette:
    primary: teal
    accent: teal
```

Primary colors

The primary color is used for the header, navigation, links, and interactive elements.

Color name	Value
red	#F44336
pink	#E91E63
purple	#9C27B0
deep purple	#673AB7
indigo	#3F51B5
blue	#2196F3
light blue	#03A9F4

Color name	Value
cyan	#00BCD4
teal	#009688
green	#4CAF50
light green	#8BC34A
lime	#CDDC39
yellow	#FFEB3B
amber	#FFC107
orange	#FF9800
deep orange	#FF5722
brown	#795548
grey	#9E9E9E
blue grey	#607D8B
black	#000000
white	#FFFFFF

Accent colors

The accent color is used for hover states, active elements, and emphasis.

Same values as primary colors, except `grey`, `brown`, `blue grey`, `black`, and `white`.

Light and dark mode

Configure multiple palettes for automatic and manual switching:

```

theme:
  palette:
    # Auto-detect system preference
    - media: "(prefers-color-scheme: light)"
      scheme: default
      primary: teal
      accent: teal
      toggle:
        icon: material/brightness-7
        name: Switch to dark mode
    - media: "(prefers-color-scheme: dark)"
      scheme: slate
      primary: black
      accent: teal
      toggle:
        icon: material/brightness-4
        name: Switch to light mode

```

Schemes

- `default` — Light mode with white background
- `slate` — Dark mode with dark grey background

Custom colors

Use any hex color value:

```

theme:
  palette:
    primary: "#1E90FF"
    accent: "#FF6B6B"

```

Code block colors

Code block themes are tied to the palette scheme:

- `default` scheme → Light code highlighting (light background)
- `slate` scheme → Dark code highlighting (dark background)

This happens automatically. No configuration needed.
